PART 1

The business

What BEWON is, the problem it solves, who it serves, how it works and where it is going.

01 · WHAT BEWON IS

Free crypto signals, a practice exchange and learning — in one place

BEWON Signals is a free platform for people who want to understand crypto before they risk money. A bot reads the market every 15 minutes and posts signals to Telegram; the website shows every result, a full practice exchange with play money, live market data, news, videos and free learning — open to anyone, in any country.

22

markets tracked
18 crypto + 4 Forex & Gold

25

services on

fees, deposits
or subscriptions

Mission

Make good trading habits free to learn and safe to practise, and show every result openly — wins and losses alike.

— 02 · THE PROBLEM

Most beginners learn crypto **with their savings**

Paid groups, hidden results

Many signal groups charge a fee and show only winning trades. Losing trades quietly disappear.

No safe place to practise

Real exchanges are the first place most people press Buy. Mistakes there cost real money.

Scattered information

Prices, news, listings, unlocks and lessons sit on dozens of sites, mostly in English only.

Scams look like jobs

Fake "investment" and "task" offers ask for a deposit first and target people looking for income.

Leverage without understanding

Futures and leverage are pushed before people know what a liquidation price is.

Jargon everywhere

Most trading education assumes knowledge beginners do not have yet.

Where BEWON starts

Every service on the platform answers one of these problems — free, in plain words, with practice money instead of savings.

03 · THE SOLUTION

Learn, practise, then decide — **for free**

1

Get the signal

The bot posts entry, two targets, a stop loss and a confidence score to Telegram.

2

Check the reasons

Each signal lists why it was taken. Unconfirmed setups are posted as Market Watch notes.

3

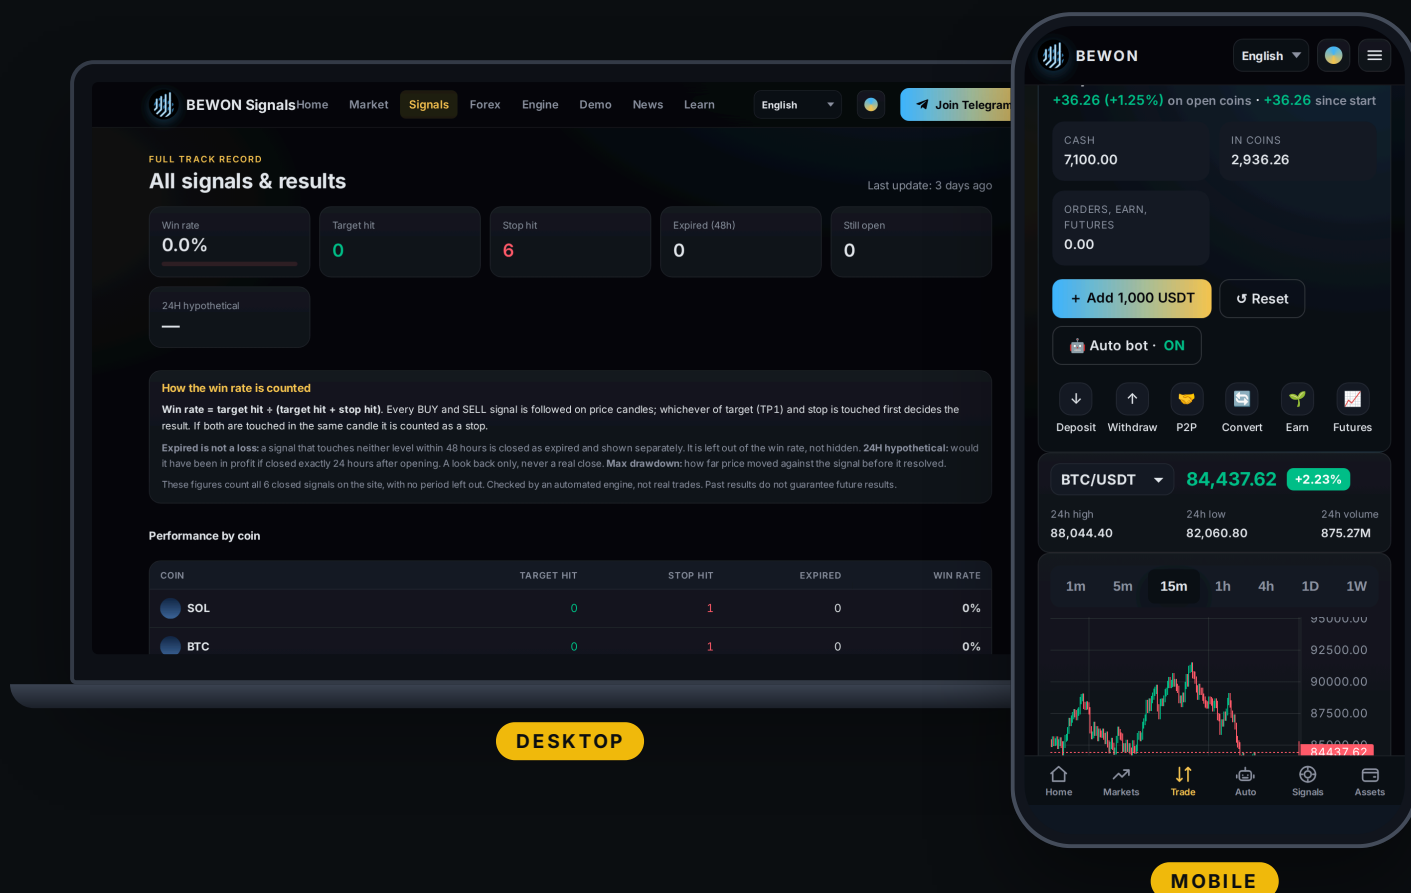

Practise the trade

Open the same trade on the practice exchange with play money and real live prices.

4

Read the result

The public track record counts every target hit and every stop hit.

**Practice first**

All trading screens use practice money. Nothing real is deposited, held or withdrawn, so a mistake costs nothing but teaches everything.

— 04 · WHO IT IS FOR

Built for the first **thousand hours** of a trader

Students and beginners

People who have never traded and want to learn the screens and the risks first.

Telegram crypto community

Members who already follow signal channels and want results they can check.

Anyone, anywhere

Free, no login needed, no region limits. Works in any browser on any device.

People looking for online income

Sixteen honest, free paths to skills-based online work — with scam warnings.

Intermediate traders

Free tools: big trades, order-book walls, unlock calendar, listings, dominance.

Partners

Signal providers whose calls are tracked publicly under their own label.

Global

open in every country

PWA

installs like an app

24/7

bot runs every 15 min

Free

no login required

05 · PRODUCT MAP

Twenty-five services in five groups

Signals

- Telegram signals
- Market Watch notes
- Public track record
- Forex & Gold signals
- Admin & partner signals

Practice exchange

- Spot trading
- Futures with TP/SL
- Assets & history
- Deposit & withdraw
- Add any token / Web3
- Convert · Earn · P2P
- Auto-trade bot (top 20, works offline)
- Gold trading

Market data

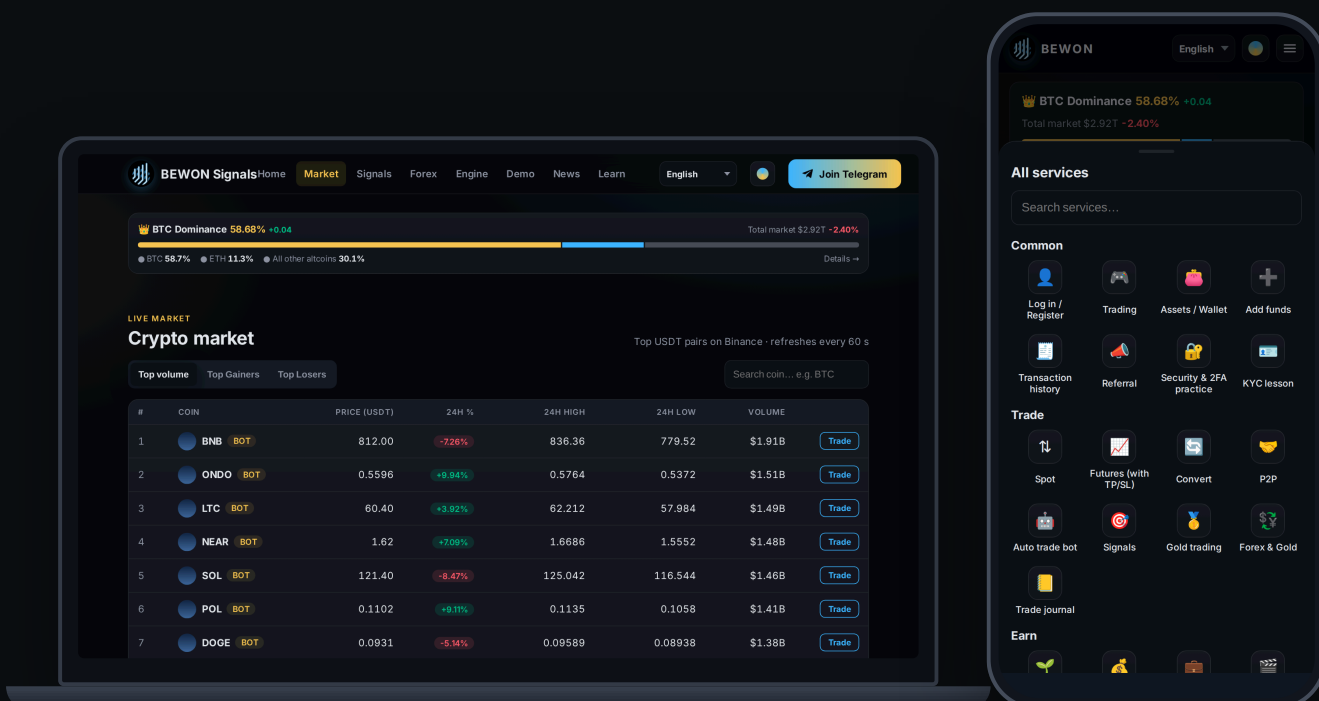

- Live market
- Coin pages & info
- Big trades & orders
- BTC dominance
- Unlocks & new coins

Learn & earn

- News portal
- Daily blog
- Videos
- Listings & airdrops
- Training checklists
- 16 earning sectors
- Remote jobs & tools

Community

- Free account
- Square posts
- Referral count
- TestScan explorer

One menu

Everything above is reachable from one searchable "All services" menu on the website.

— 06 · WHAT MAKES IT DIFFERENT

Open results, practice money, **plain words**

Typical paid signal group		BEWON
Price	Monthly fee	Free
Results	Winners shown, losers hidden	Every closed signal public
Why a signal	Rarely explained	Reasons and confidence listed
Weak setups	Posted as signals anyway	Posted as Market Watch notes
Practice	None	Full practice exchange
Your money	Sometimes asked to deposit	Never — no deposits accepted
Access	Often invite-only or regional	Open worldwide, any device

How the win rate is counted

Win rate = targets hit ÷ (targets hit + stops hit), over every closed signal, with no period left out. Expired signals are shown separately — never hidden.

— 07 · HOW IT WORKS

A small, open **technology stack**

Signal bot

Python on GitHub Actions, every 15 minutes.
Reads candles, scores setups, posts to Telegram, writes JSON for the site.

Website

One fast page app on GitHub Pages. Installs as an app (PWA). Works without an account.

Market data

Public price APIs for crypto, a Forex data service for currency pairs and gold, coin facts from a public coin database.

Accounts

Optional login with Firebase: email or Google.
Saves the practice balance and Square posts.

Telegram

Signals, Market Watch notes, news, daily blog teasers and sudden-move alerts.

Open record

Every signal and its outcome is stored in a public data file the site reads.

Market data

BEWON bot

Telegram

Website

Practice exchange

No custody

BEWON never holds anyone's money or keys. There is nothing to hack that belongs to users.

— 08 · GROWTH CHANNELS

How people **find and stay**

Telegram channel

Signals and daily posts bring readers back to the website for details and practice.

Daily blog

Morning digest, evening trending and a daily lesson — each teased on Telegram with a link.

Search-friendly pages

News, blog and coin pages give people a reason to arrive from search.

Installable app

Add to home screen from the menu; a Play Store package is planned.

Square

Members write learning posts, reviewed by an admin before they are public.

Referral link

A personal invite link with a join count. A count only — no money or rewards.

— 09 · SUSTAINABILITY

Free today. Options for tomorrow

The platform runs on free tiers (GitHub, Firebase, public data). None of the options below is active today; each would be clearly labelled if introduced.

Labelled sponsorships

Sponsored education or tools, always marked as sponsored and never mixed into signals.

Advanced courses

Deeper paid courses on top of the free lessons, with the free core kept free.

Disclosed partner links

Links to licensed exchanges, disclosed as partner links where a commission exists.

Partner signal programme

Providers listed with their own public track record, under the same counting rules.

Lines that will not be crossed

No paid “guaranteed profit” signals. No taking deposits. No money-for-referrals schemes. No hidden losing trades.

— 10 · EARNING ONLINE

Real skills, not shortcuts

The Learn section explains sixteen free ways to start earning online. Each sector covers what the work is, what is needed, three steps to start and where to learn for free.

01	Freelancing	3–6 mo	02	Content writing	1–3 mo
03	Graphic design	2–4 mo	04	Video editing	2–4 mo
05	Web development	6–12 mo	06	Digital marketing & SEO	3–6 mo
07	YouTube	6–18 mo	08	Affiliate marketing	6–12 mo
09	Online tutoring	1–2 mo	10	Virtual assistant	1–3 mo
11	Translation	1–3 mo	12	Stock media	3–9 mo
13	App testing & bug bounty	1–12 mo	14	Airdrops & Learn & Earn	uncertain
15	Microtasks & surveys	days	16	Selling online	1–3 mo

Times are rough estimates

They are typical times to a first income, not promises. Anything that asks for money before work is called out as a scam.

— 11 · ROADMAP

What is **coming next**

Now

LIVE

- ✓ Signals + public record
- ✓ Practice exchange (spot, futures, wallet)
- ✓ Auto bot, gold, Web3 tokens
- ✓ News, blog, learning

Next

PLANNED

- ✓ Admin practice balances
- ✓ More order types: stop-limit, OCO, trailing stop
- ✓ Grid and DCA practice bots
- ✓ Practice trading leagues

Later

EXPLORING

- ✓ Copy-trading practice
- ✓ Margin and options lessons
- ✓ Push price alerts
- ✓ Play Store app

Full details

The BEWON Whitepaper explains every current feature and every planned one, with what it will do and why.

PART 2

User manual

Every feature, step by step, with the desktop and mobile screens side by side.

— M1 · GETTING STARTED

Open, choose your language, **start**

1 Open the website

bewonnetwork.github.io/crypto-singals in any browser, on phone or computer.

3 Join Telegram

Tap “Join Telegram” to get every signal and alert.

5 Open the menu

The ☰ button lists all 25 services, with search.

2 Pick a language

Use the language box at the top of every page.

4 Install as an app

Menu → Install app. BEWON appears on the home screen.

6 Account is optional

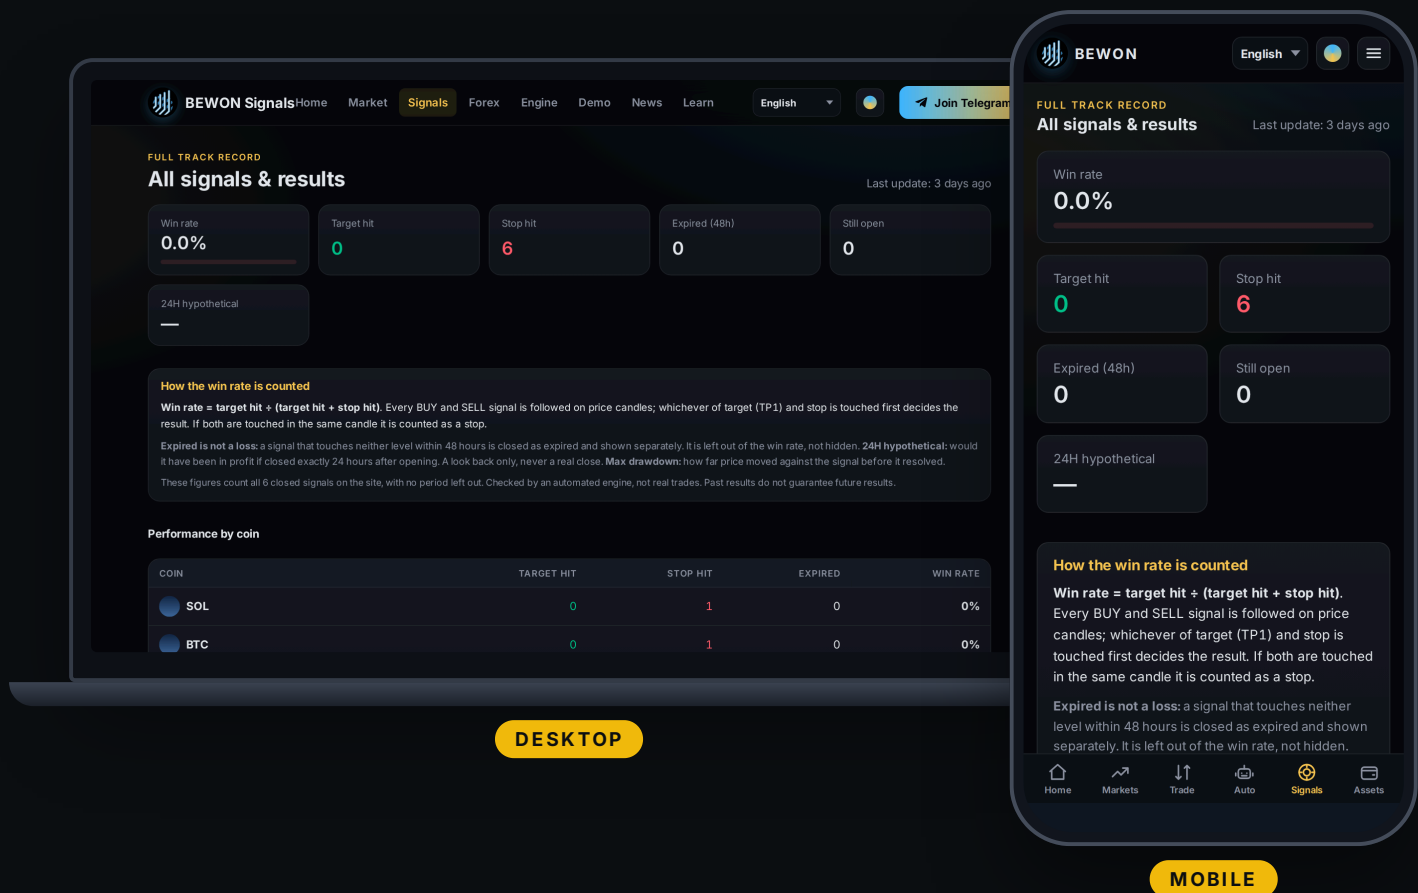

Log in only if you want your practice data saved across devices.

No login needed

Every page works without an account. Log in only to keep your practice data on more than one device.

— M2 · READING A SIGNAL

Entry, targets, stop — and the reasons

DESKTOP

MOBILE

1 Coin and side

BUY means price is expected to rise, SELL that it is expected to fall.

2 Entry

The price the signal was taken at.

3 TP1 and TP2

Two take-profit targets. After TP1 the stop moves to entry.

4 Stop loss

Where the idea is wrong. Always use it.

5 Confidence

How many extra checks agree. It is not a promise.

6 Market Watch note

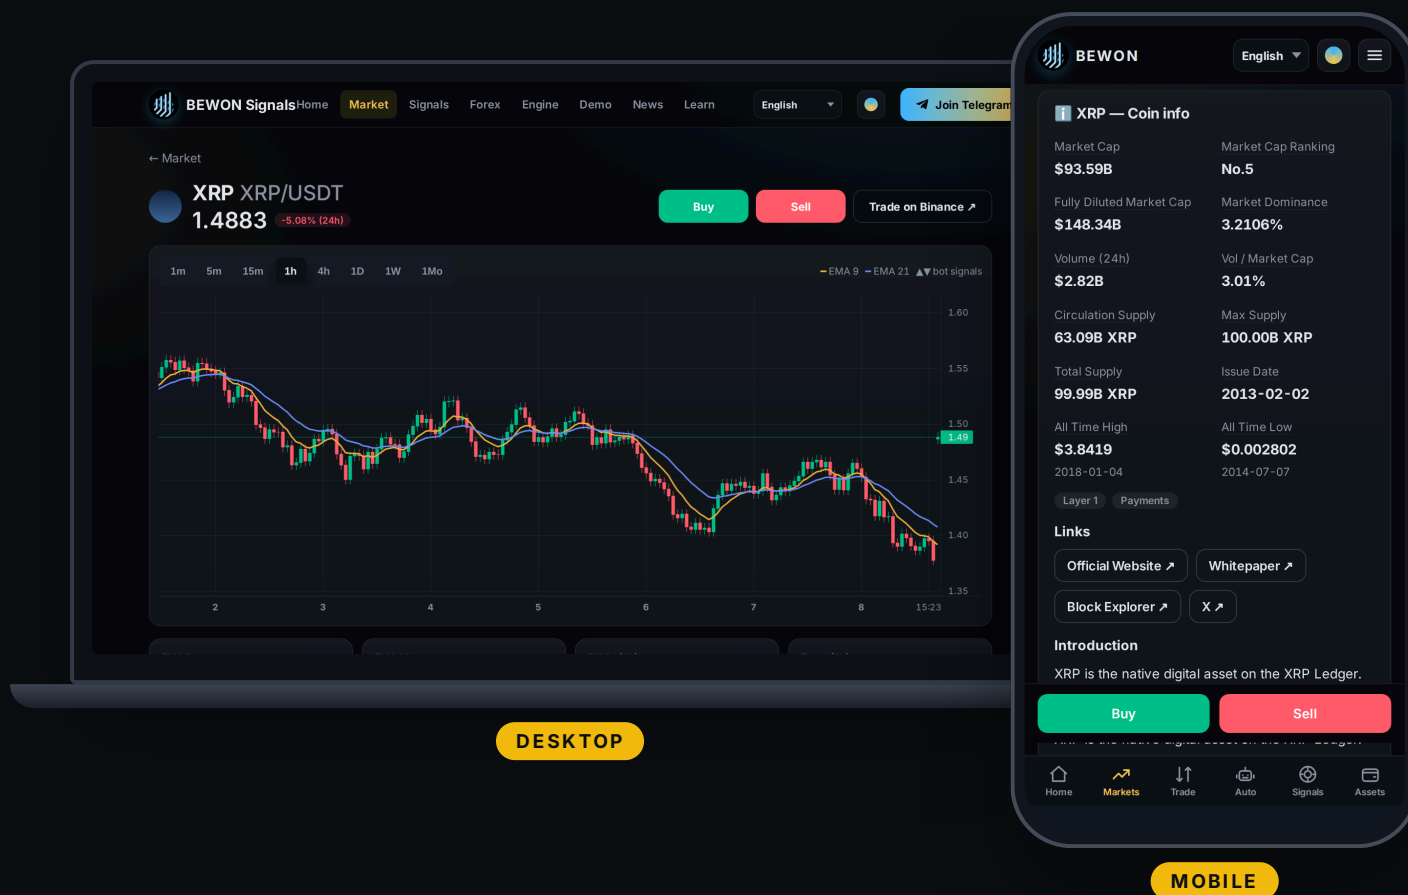

A setup that did not pass enough checks: no entry, target or stop.

A note is not a trade

Market Watch notes share what the bot sees when a setup is not confirmed. They carry no entry, target or stop on purpose.

— M3 · MARKET & COIN PAGES

Find a coin, read its chart and facts

**1 Open Market**

See top coins by volume, gainers or losers.
Search any symbol.

3 Change timeframe

1m, 5m, 15m, 1h, 4h, 1D, 1W or 1M.

2 Tap a coin

Its page opens with a live candle chart.

4 Read the indicators

EMA 9/21 on the chart; RSI and trend below it.

5 Scroll to Coin info

Market cap, FDV, supply, all-time high/low and official links.

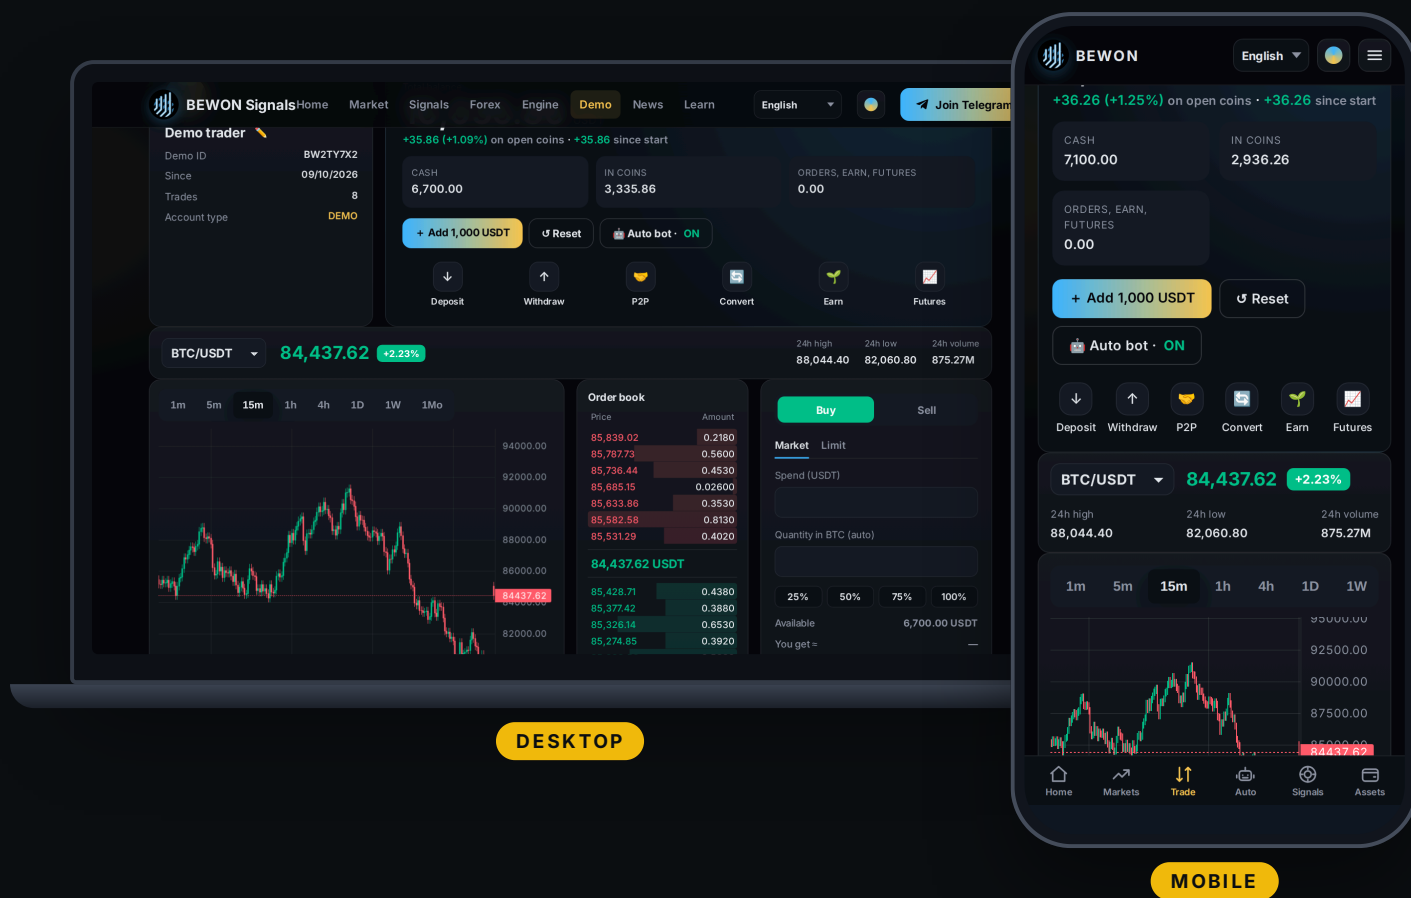

6 Buy or Sell

Opens the practice trade screen for that coin.

Start with bigger timeframes

Read the 4h and 1h charts first. Very short timeframes move a lot and are harder to read.

— M4 · SPOT TRADING

Place a **buy or sell**

DESKTOP

MOBILE

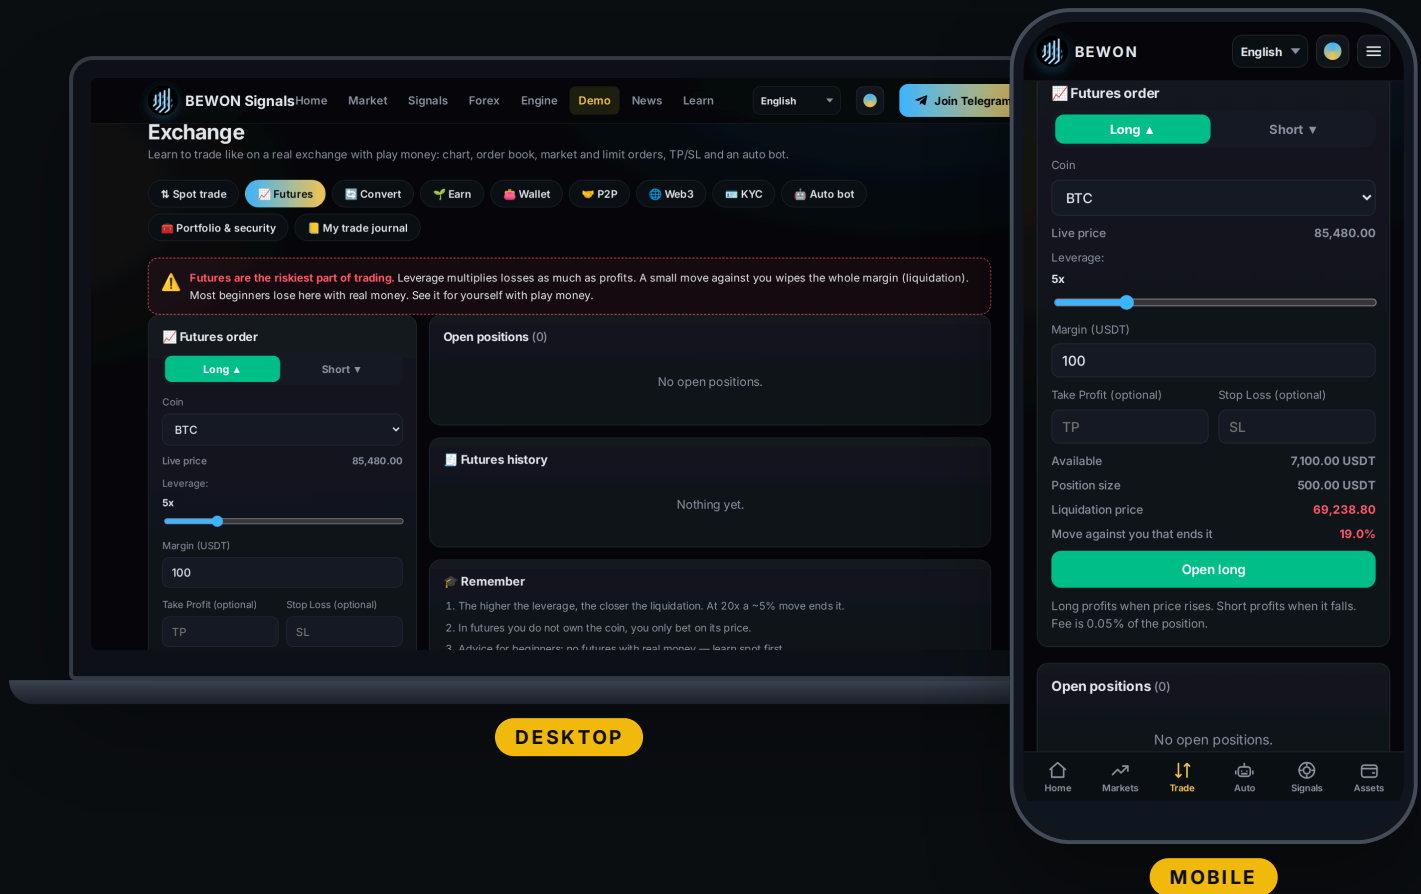

- 1 Choose the pair**
Pick a coin from the selector, e.g. BTC/USDT.
- 2 Buy or Sell tab**
Green to buy, red to sell.
- 3 Market or Limit**
Market fills now; Limit waits for your price.
- 4 Enter the amount**
Type USDT or use 25 / 50 / 75 / 100% buttons.
- 5 Optional TP/SL**
Set a target and a stop for the holding.
- 6 Confirm**
The order appears in Open orders or Assets. A 0.1% fee applies, like real.

Practice balance

Trading uses practice USDT. Use Add 1,000 USDT or Reset on the exchange page to start again at any time.

— M5 · FUTURES

Long or short with TP and SL

DESKTOP

MOBILE

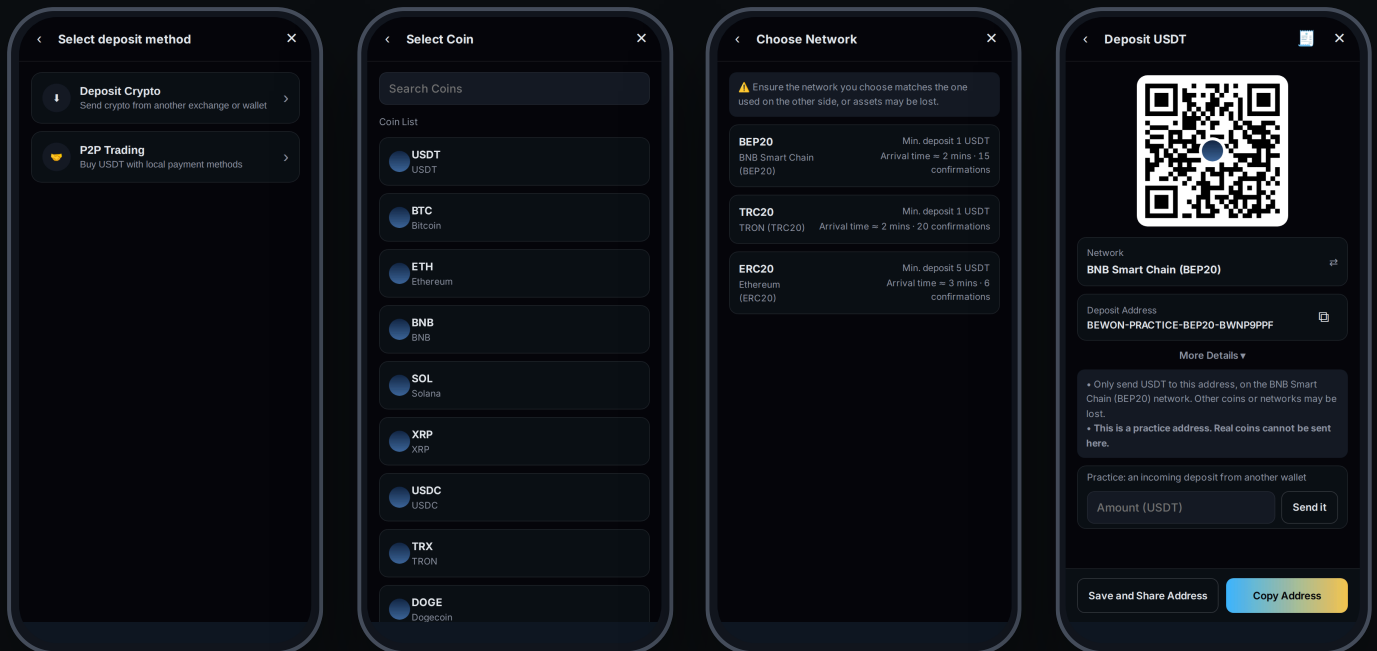

- 1 Open Futures**
 From the exchange tabs or the menu.
- 2 Long or Short**
 Long gains if price rises; Short gains if it falls.
- 3 Set leverage**
 Use the slider. Higher leverage = closer liquidation.
- 4 Enter margin**
 The practice USDT you put into the position.
- 5 Set TP and SL**
 Both optional; can be edited later on the open position.
- 6 Check liquidation**
 Shown before you open. Then tap Open long / Open short.

Remember

With real money, leverage multiplies losses as much as profits. Beginners should learn spot first.

— M6 · DEPOSIT

Add funds — step by step

1 Select method

2 Select coin

3 Choose network

4 Address & QR

1 Assets → Deposit

Or tap "Add Funds" on the Assets page.

3 Select coin

Search or pick from the list, e.g. USDT.

2 Deposit Crypto

Choose "Deposit Crypto". P2P Trading is the other option.

4 Choose network

Each shows minimum deposit, arrival time and confirmations.

5 Copy the address

Copy it, or share it, or scan the QR code. Add the MEMO when shown.

6 Watch it arrive

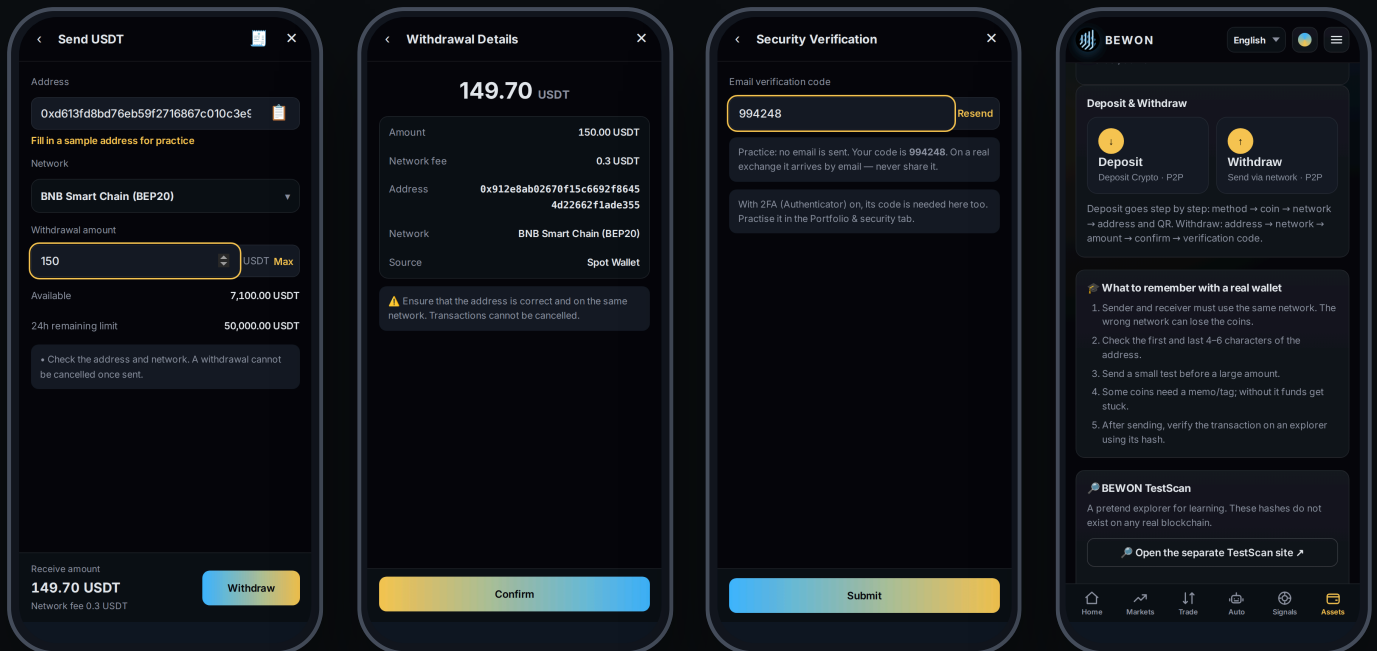

Status goes from Processing to Completed and the balance updates.

Practice address

Addresses start with BEWON-PRACTICE. Real coins cannot be sent to them. Use "Practice: an incoming deposit" to simulate one.

— M7 · WITHDRAW

Send crypto — step by step

1 Address & amount

2 Check details

3 Verification code

4 Status

1 Assets → Withdraw

Choose "Send via Crypto Network", then the coin.

3 Enter the amount

Or tap Max. Minimum, available balance and 24h limit are shown.

5 Confirm the details

Amount, address, network, source. It cannot be cancelled later.

2 Paste the address

The network is matched automatically when the address shows it.

4 Check Receive amount

Amount minus the network fee. Then tap Withdraw.

6 Security verification

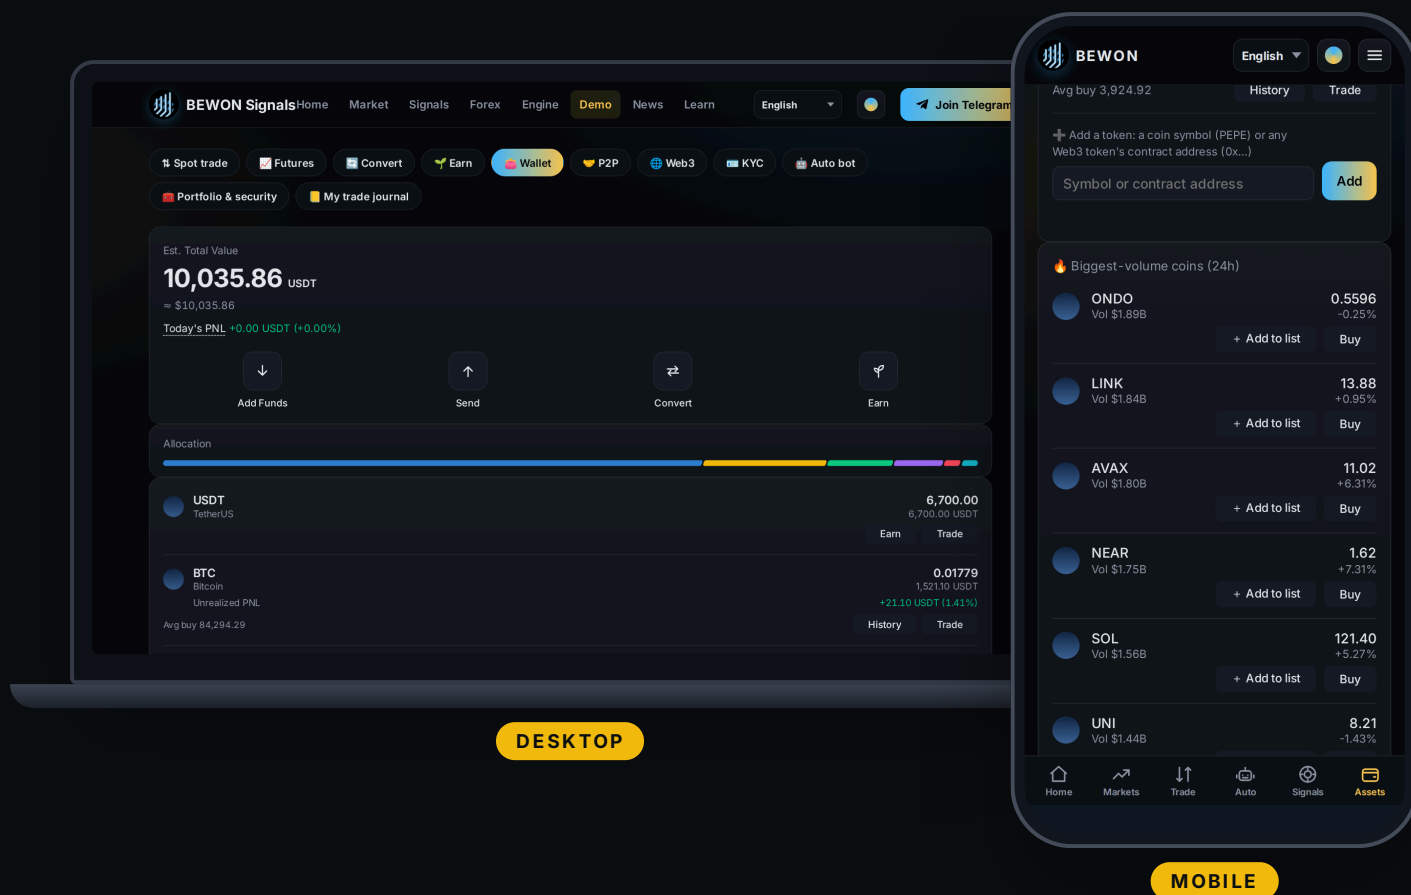

Enter the email code (shown on screen in practice) and the 2FA code if enabled.

Golden rule

The first and last characters of the address and the network must match the receiving side. On a real exchange, a wrong network can lose the coins.

— M8 · ASSETS & TOKENS

Balances, history and any token

DESKTOP

MOBILE

1 Total value

Top card: estimated total and today's profit or loss.

3 History per coin

Tap History on a coin to see every buy and sell.

5 Add a coin

Type a symbol, e.g. PEPE, and tap Add.

2 Holdings

Biggest coins first, each with average buy price and PNL.

4 All transactions

Today first. Pick Yesterday, Last 7 days or a date.

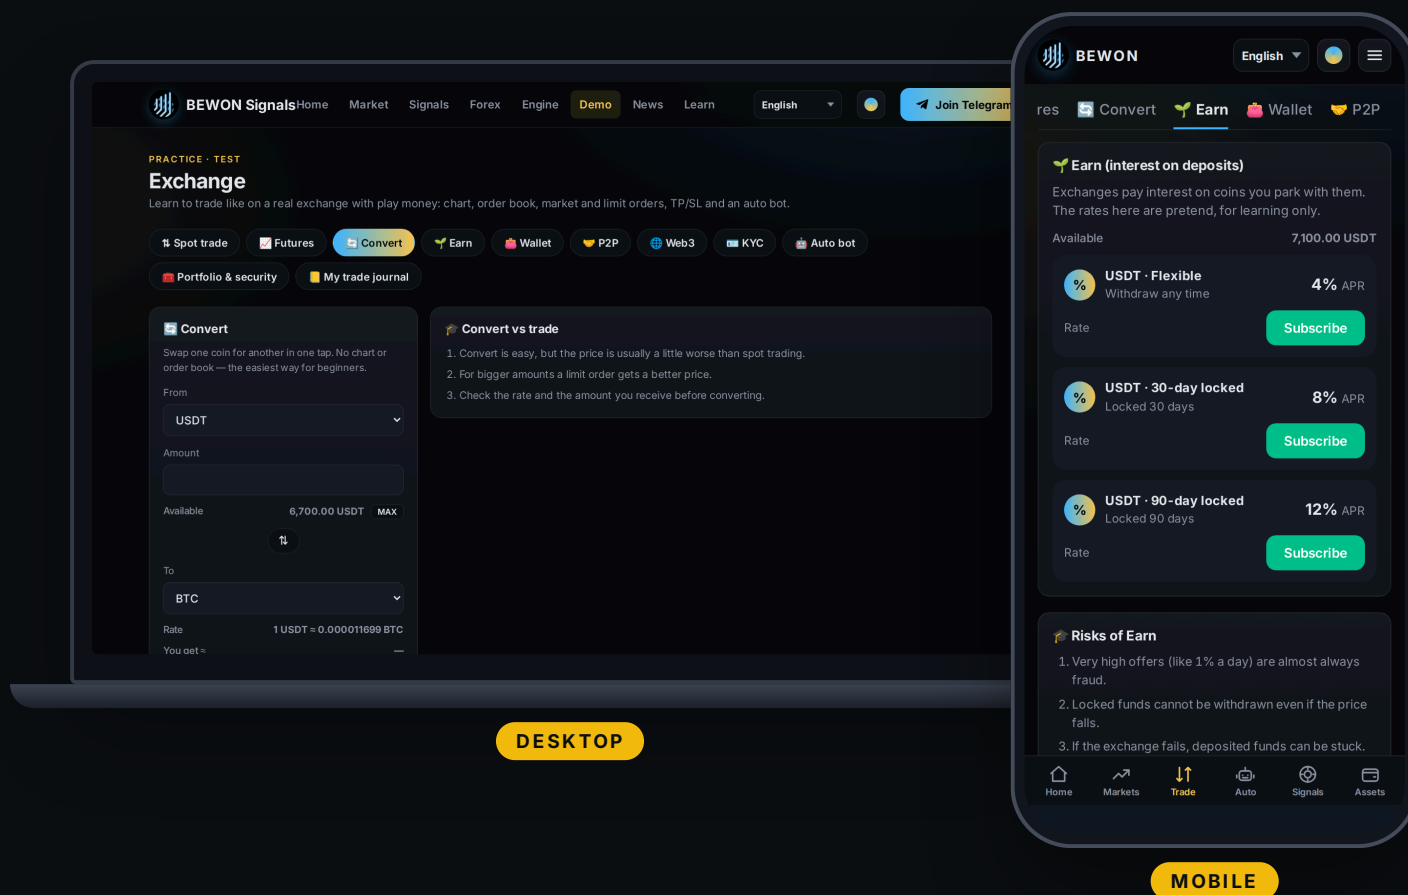

6 Add a Web3 token

Paste a 0x... contract address; risk warnings are shown.

Web3 token warnings

Low liquidity, a very new pair or a copied name is flagged. With real money, tokens like these carry a very high risk of loss.

— M9 · CONVERT, EARN, P2P

Three more desks, **practice only**

DESKTOP

MOBILE

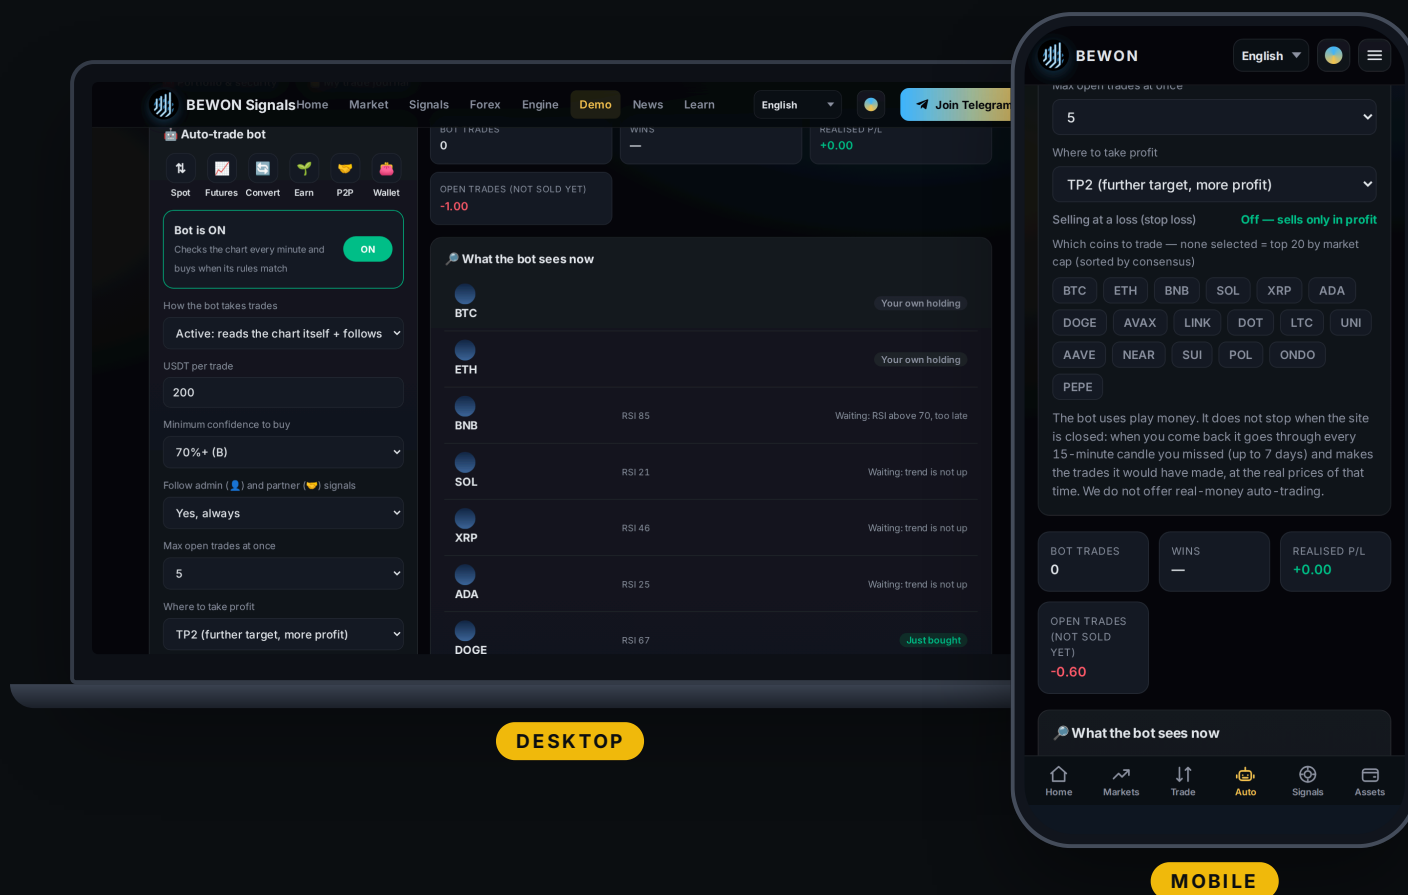

- 1 Convert**
Choose From and To coins, enter an amount, read the rate, convert.
- 2 Earn**
Pick flexible or locked; read the listed risks before subscribing.
- 3 P2P buy**
Choose a merchant, enter USDT, follow the three order steps.
- 4 P2P sell**
Release USDT only after the money shows in your own account.
- 5 Rates are examples**
Earn rates and P2P prices are for learning, not offers.
- 6 Never outside chat**
On real P2P, never pay or talk outside the exchange.

How escrow works

On a real P2P desk the seller's coins are locked by the exchange until the seller confirms the payment arrived.

— M10 · AUTO-TRADE BOT

A bot that keeps trading **while you are away**

DESKTOP

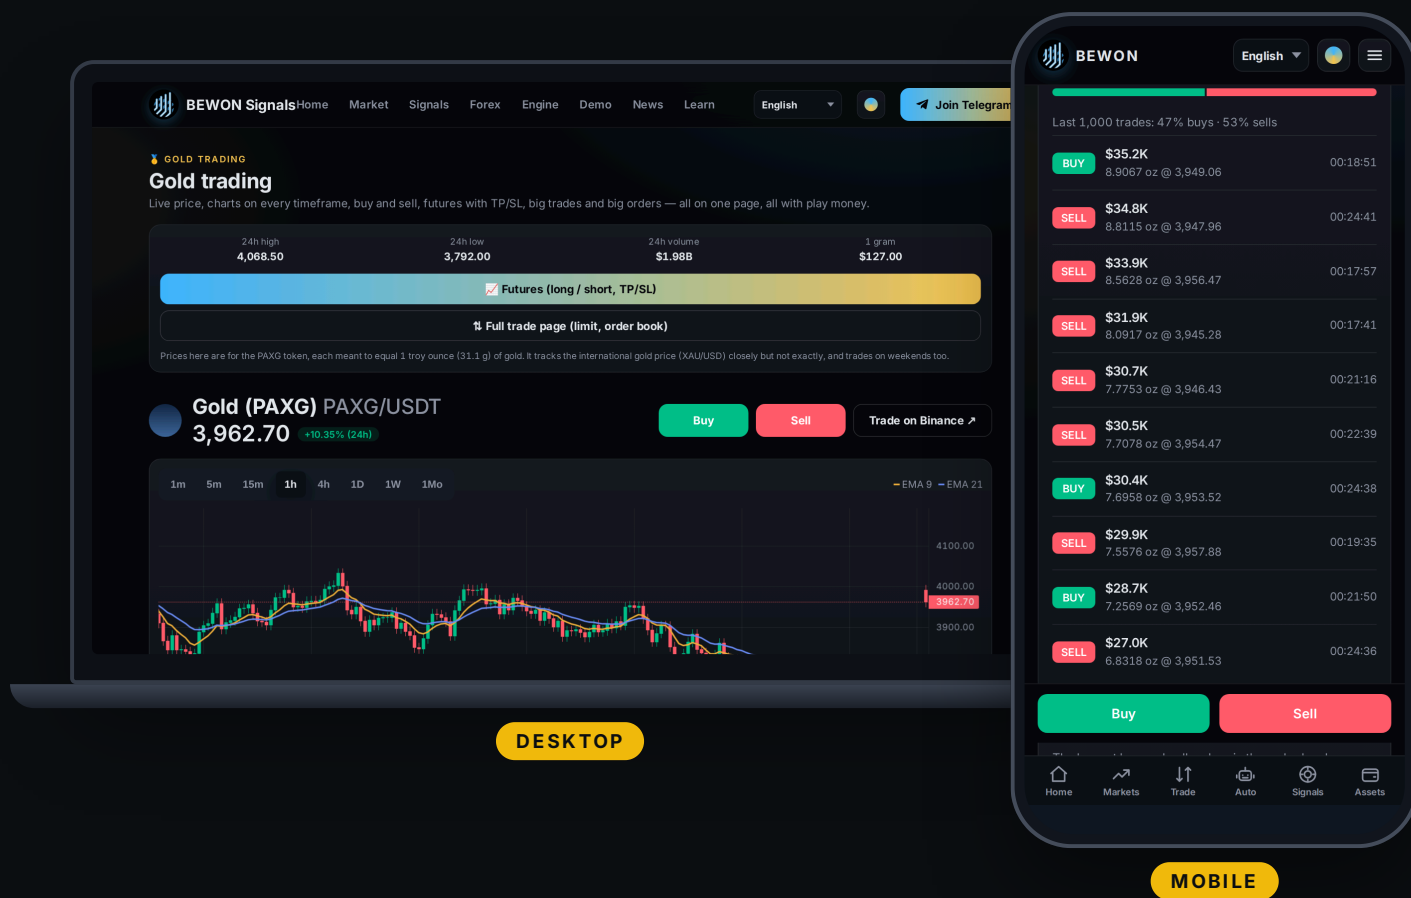

MOBILE

- 1 Open Auto bot**
Exchange tabs → Auto bot, or the Auto tab on mobile.
- 2 Switch ON**
It reads the 15-minute chart of the top-20 coins by market cap first.
- 3 Outside opinion**
Each coin carries a 0–100 consensus from several public sources; it skips coins that lean to sell.
- 4 Profit-only selling**
No stop loss: it sells only at its target or when in profit, and holds otherwise.
- 5 Works offline**
When you return, it replays the 15-minute candles you missed (up to 7 days) at real past prices.
- 6 Read the results**
Realised profit, and open trades that have not been sold yet, are both shown.

Trade-off of profit-only

Without a stop loss a falling coin is held until it recovers, so practice money can stay stuck for a long time. With real money this is risky.

— M11 · GOLD & BIG TRADES

Trade gold, **watch large money****1 Open Gold**

Menu → Gold trading.

2 Read the price

Per ounce and per gram, with 24h high, low and volume.

3 Buy, sell or futures

Spot orders, or long/short with TP and SL.

4 Big trades done

Largest recent trades, green = buy, red = sell.

5 Big orders waiting

Large resting orders and their distance from price.

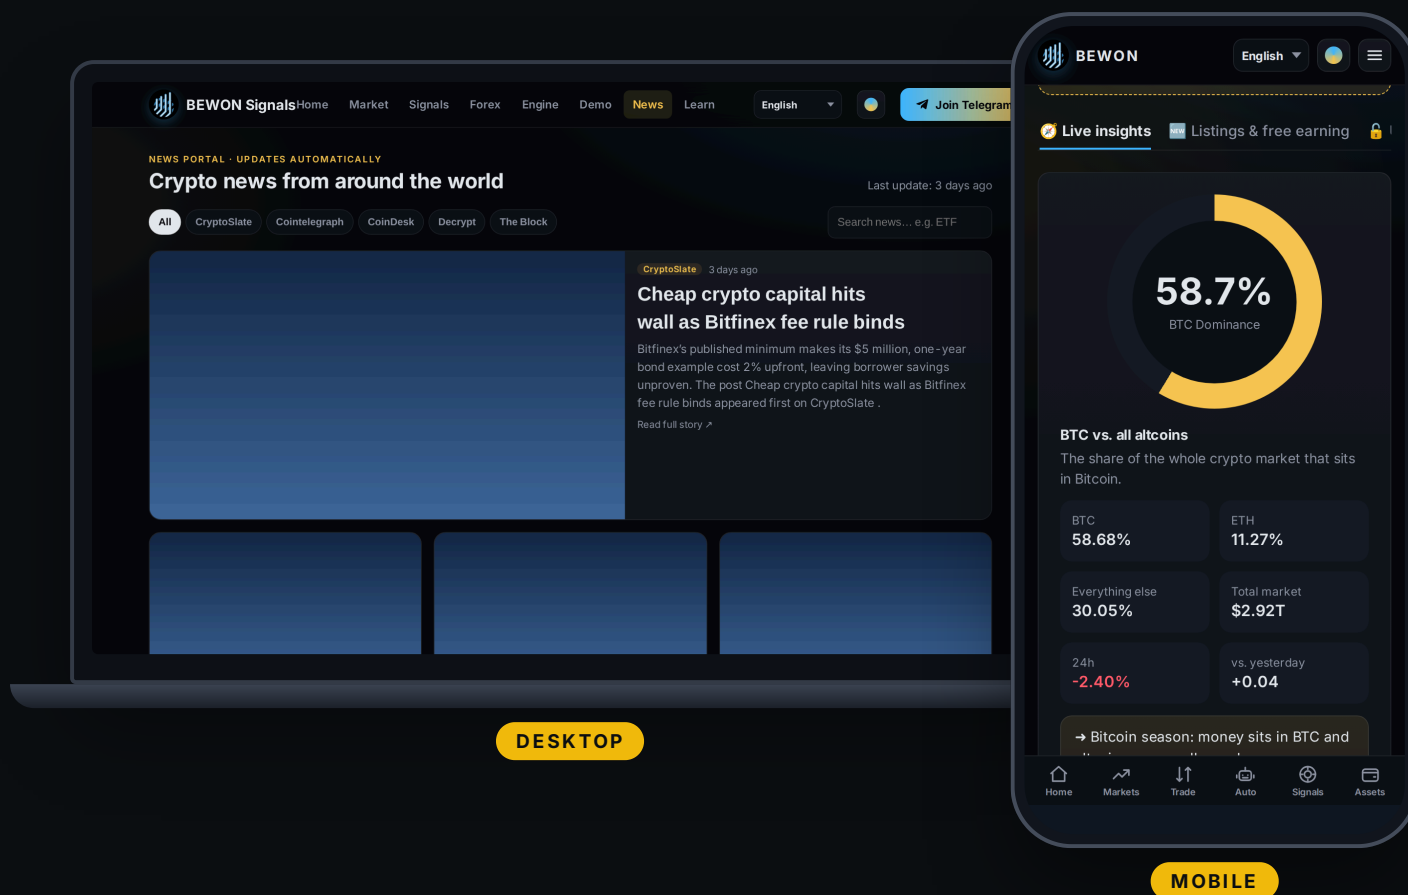

6 Other coins

Menu → Big trades for BTC, ETH and nine more.

How gold is priced

Gold uses PAXG, a token that tracks one troy ounce of gold, so it trades around the clock.

— M12 · NEWS & INSIGHTS

Stay informed **every day****1 News**

Filter by publisher or search a keyword; each story links to its source.

2 Blog

Morning digest, evening trending and a daily lesson.

3 Listings & airdrops

New exchange listings and free-earning announcements.

4 Unlock calendar

Upcoming token unlocks and their share of supply.

5 New coins

Recently added coins — with a strong risk warning.

6 Insights

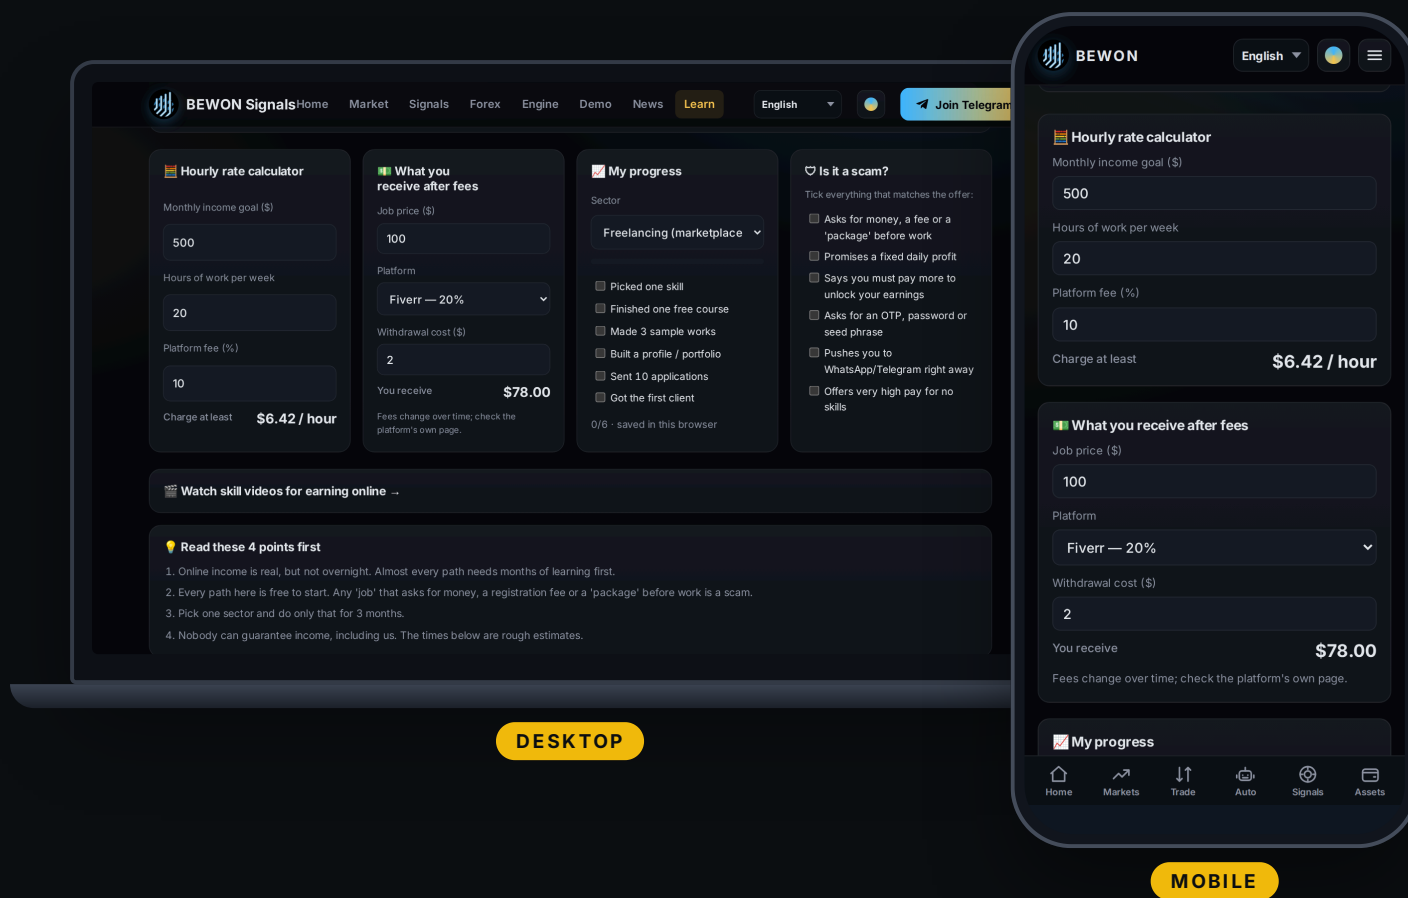

BTC dominance, order-book walls and checklists.

Check the source

Listings and airdrops are news, not advice. Confirm on the official page before doing anything.

— M13 · LEARN & EARN ONLINE

From zero to a first income

1 Open Learn → Earn online

Sixteen sectors, each with the work, what you need and three steps to start.

3 Hourly rate calculator

Turns a monthly goal and hours into the rate to charge.

5 Progress tracker & scam check

Tick your milestones; tick warning signs to test an offer.

2 Live remote jobs

Updated every 6 hours from public job boards; filter by skill and search.

4 Fee calculator

Shows what you keep after platform and withdrawal fees.

6 Videos

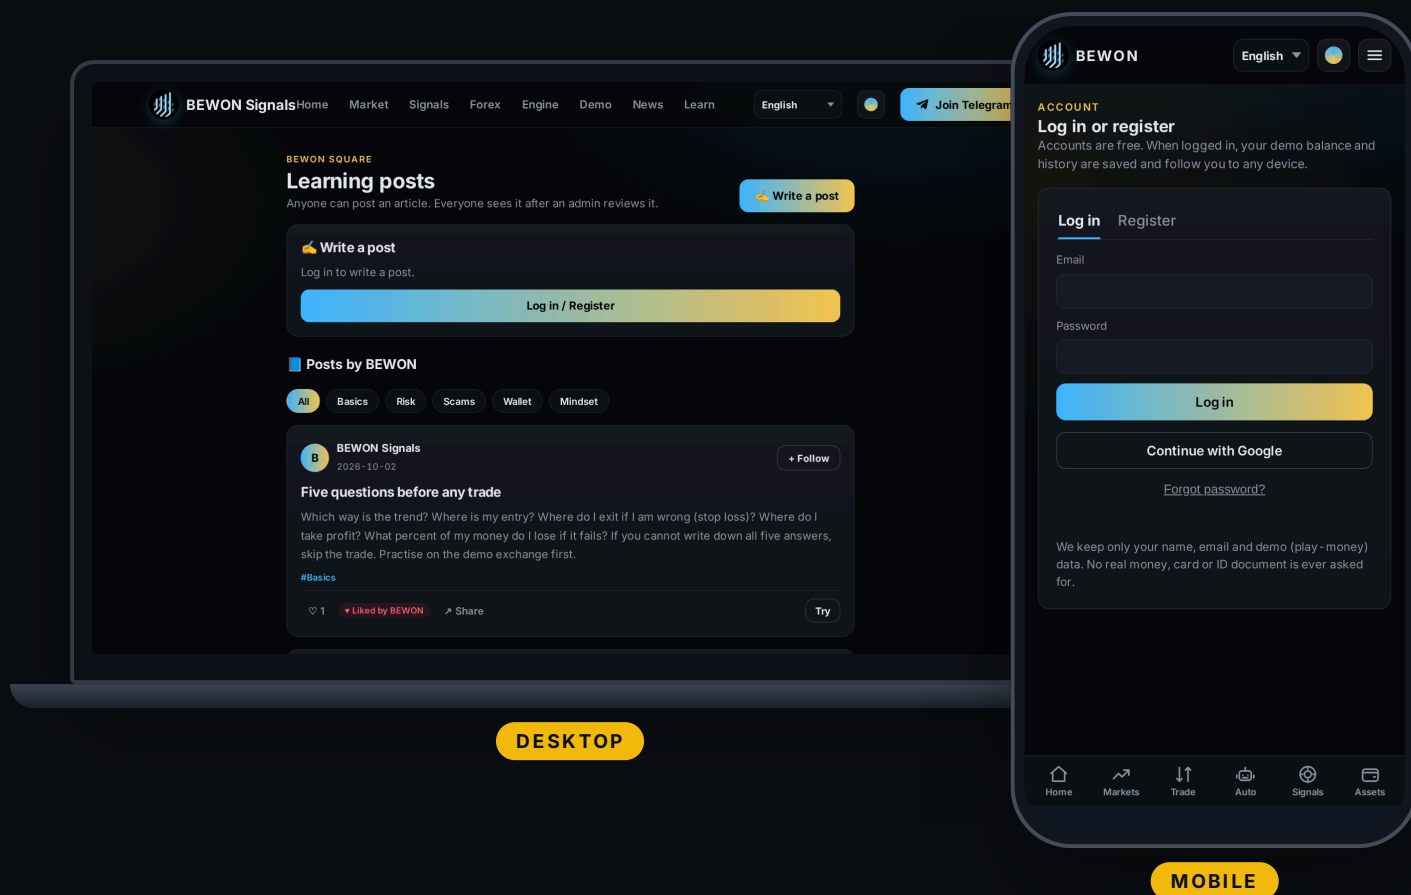

Learn → Videos: free crypto and skills videos, added automatically.

Never pay to work

A real client pays you. Anyone who asks for a fee, deposit or package before work is running a scam.

— M14 · ACCOUNT, SQUARE & SECURITY

Save progress, share, **stay safe**

DESKTOP

MOBILE

- 1 Create an account**
Menu → Log in / Register. Email or Google.
- 2 Sync**
Practice balance and history follow you to other devices.
- 3 Write on Square**
Tap "Write a post"; an admin approves it, then BEWON likes it.
- 4 Like posts**
Logged-in members like posts; one like per person.
- 5 Security checklist**
Portfolio & security tab: 2FA, anti-phishing, whitelist.
- 6 2FA practice**
Scan the key in Google Authenticator and test a code.

What is stored

Name, email and practice data only. No card, bank or identity document is ever requested.

— M15 · SAFETY RULES

Ten rules that **protect your money**

- 1 Never share your seed phrase.** No exchange, admin or support person will ever ask for it.
- 2 Never pay to receive money.** "Unlock fees", "tax first" and "activation deposits" are scams.
- 3 Always use a stop loss.** Decide the exit before the entry.
- 4 Risk 1–2% per trade.** One bad trade should never hurt the account.
- 5 Check the network twice.** Sender and receiver must use the same network.
- 6 Send a small test first.** Before any large transfer.
- 7 Turn on 2FA.** An authenticator app is safer than SMS.
- 8 Beware of new coins.** Many fall to zero or are scams.
- 9 Learn spot before futures.** Leverage multiplies losses.
- 10 Signals are not advice.** They are information. You decide, and you are responsible.

Not financial advice

BEWON shares information and practice tools only. Crypto is high-risk. Past results do not promise future results.

Start free today.

Open the website, join the Telegram channel and practise with play money before any real trade.
