BEWON Signals

WHITEPAPER · VERSION 1.0 · OCTOBER 2026

Whitepaper

A free, transparent platform to learn and practise crypto trading.

Architecture, signal method and published results, every practice-exchange module, the full-exchange feature map, and the features that are coming next — explained.

ABSTRACT

A free, transparent platform to learn and practise crypto

BEWON Signals is a free education and information platform for people who want to understand crypto markets before they risk money. It combines three things that are usually found in separate places: an automated signal service with a fully public track record, a practice exchange that behaves like a real one but uses play money, and a market-information and learning layer open to anyone, in any country.

BEWON does not take deposits, hold assets, issue a token or sell signals. All trading screens use practice balances; practice deposit addresses cannot receive real coins. The project is funded from free infrastructure tiers and is designed so that it can stay free.

This paper describes what exists today, how each part works, how results are measured, and which features a full exchange offers that BEWON does not have yet — with an explanation of what each planned feature will do and why it is on the roadmap.

Version	1.0 — October 2026
Website	bewonnetwork.github.io/crypto-singals
Telegram	t.me/all_crypt_signals
Status	Live, free, practice money only
Token	None. No token sale, no fundraising from users.

1 · BACKGROUND

Why a practice-first platform

The problem

Most people meet crypto through a real exchange, a signal group or a social-media post. In each case the first real lesson is usually a loss. Paid signal groups commonly show winners and hide losers; leverage is promoted before people understand liquidation; and scams increasingly look like jobs or investment plans.

What is missing

- A place to practise the exact screens of an exchange without money at risk.
- Signals whose every outcome is published, including stops and expired trades.
- Plain-language explanations in the reader's own language.
- One place for prices, news, listings, unlocks and learning.

Design principles

Free	Every feature is free. There is no premium tier today.
Transparent	Every closed signal is public, with the counting rule printed next to it.
Practice first	Trading uses play money. Real-money screens are taught, not offered.
No custody	BEWON never holds funds, keys or seed phrases.
Plain words	Short explanations next to technical terms; a multilingual interface.
Honest limits	Weak setups are labelled; losses are counted; risks are written on the page.

2 · ARCHITECTURE

How the platform is built

BEWON is intentionally small: a scheduled bot, a static website and an optional account service. Each part can be inspected and replaced independently.

Component	What it does
Signal bot	Python, run by GitHub Actions every 15 minutes. Reads candles, scores setups, manages open signals, posts to Telegram and writes public data files (signals, news, blog, insights).
Website	A single-page web app on GitHub Pages. Installable as a PWA. Runs fully without an account; practice data is stored in the browser.
Accounts	Optional Firebase Authentication (email or Google). Firestore stores the profile, practice data sync, Square posts and referral counts under security rules.
Crypto data	Public market endpoints for prices, candles, order books and recent trades; a public coin database for coin facts; a DEX data API for contract-address tokens.
Forex & gold	A Forex data service for nine currency pairs (EUR/USD, GBP/USD, USD/JPY, AUD/USD, USD/CAD, USD/CHF, NZD/USD, EUR/JPY, GBP/JPY), gold and silver.
Telegram	Signals, Market Watch notes, sudden-move alerts, news and daily blog teasers. Admin and partner commands are accepted only from channel administrators.

Secrets and keys

Bot tokens and API keys live only in repository secrets. The website contains only public configuration. No private key, seed phrase or user password is ever stored by BEWON.

3 · SIGNAL ENGINE (1/2)

How a signal is made and measured

Base rules (1-hour candles, checked every 15 minutes)

BUY	EMA 9 crosses above EMA 21, RSI between 45 and 70, volume above its 20-candle average.
SELL	EMA 9 crosses below EMA 21, RSI between 30 and 55, volume above average.
Stop loss	1.5 × ATR from entry.
Targets	TP1 = 1.5 × ATR, TP2 = 3 × ATR. After TP1 the stop moves to entry.
Expiry	If nothing is hit within 48 candles, the signal expires.

Confidence and the confirmation gate

Extra filters give a confidence score from 0 to 95%: the 4-hour trend (EMA 50/200), price versus EMA 200, MACD momentum, trend strength (ADX), volume and Bitcoin's direction. The final score blends the 1-hour score (75%) with multi-timeframe agreement on 4H, 15M and 5M (25%). A full signal needs a score of at least 60 and at least three of four confirmations (run-up, RSI, extension, range). Otherwise the setup is published as a **Market Watch** note with no entry, target or stop — at most four per day.

Measurement

Win rate = targets hit ÷ (targets hit + stops hit), over every closed signal. Expired signals are shown separately. Each signal also records its maximum drawdown and its position after 24 hours.

3 · SIGNAL ENGINE (2/2)

Outside opinion and published results

Consensus of outside sources

Every hour the bot rates the top-20 coins by market cap with several public sources — TradingView technical ratings (1h, 4h, 1D), CoinGecko momentum and community votes, Gate.io trader positioning and BEWON's own engine — and publishes a 0–100 score. The practice bot uses it to choose which coins to check first and to skip coins that lean to sell.

Current results — published as they are

Live record (8 Oct 2026)	7 closed signals: 0 targets hit, 7 stops hit.
Two-year backtest (generated 3 Oct 2026, 10 coins)	1,264 signals · win rate 50.4% · profit factor 0.75 · total −180.1 R. The base rules lost money over this period.

These results are the reason the confirmation gate, Market Watch notes and the research tools on the roadmap exist. BEWON will keep publishing results whether they are good or bad. Signals are information, not financial advice.

4 · PRACTICE EXCHANGE (1/2)

An exchange that uses play money

Every account starts with 10,000 practice USDT (cap 100,000). Prices are live. A 0.1% fee applies to spot orders so results stay realistic. Nothing on these screens can receive, hold or send real assets.

Module	Status	What it does
Spot trading	LIVE	Market and limit orders, live order book, candle chart with 8 timeframes, TP/SL on holdings.
Futures	LIVE	Long and short, leverage 1–20x, margin, liquidation price shown before opening, TP/SL set or edited later, futures history.
Assets	LIVE	Total value, today's PNL, allocation bar, holdings sorted by value, average buy price, per-coin history, all transactions by date.
Deposit	LIVE	Exchange-style steps: method → coin → network → address and QR, MEMO where needed, minimum deposit, confirmations, arrival time. Addresses start with BEWON-PRACTICE and cannot receive real coins.
Withdraw	LIVE	Address with automatic network matching, amount with Max, minimum, 24h limit, receive amount and fee, confirmation page, email-code and 2FA verification step (codes are shown on screen in practice), processing status and TxID.
Coins & networks	LIVE	24 coins (USDT, USDC, BTC, ETH, BNB, SOL, XRP, TRX, DOGE, LTC, ADA, DOT, LINK, AVAX, POL, SHIB, PEPE, TON, UNI, ARB, NEAR, SUI, BCH, XLM) on 19 networks, including BEP20, TRC20, ERC20, Arbitrum, Solana, Polygon, AVAX C-Chain, TON and their native chains.

4 · PRACTICE EXCHANGE (2/2)

Every other desk

Module	Status	What it does
Add any token	LIVE	Add a listed coin by symbol, or any Web3 token by contract address with a DEX price and warnings for low liquidity, new pairs and copied names.
Convert	LIVE	Swap one coin for another in one step with the rate shown first.
Earn	SIMULATED	Flexible and locked saving with listed risks. Rates are examples, not offers.
P2P	SIMULATED	Practice merchants, payment methods and the three escrow steps for buying and selling.
Web3 wallet	SIMULATED	Create a practice wallet and learn how a seed phrase works. Practice words are deliberately not valid wallet words.
KYC lesson	LESSON	Explains verification levels. No identity document is ever collected.
Auto-trade bot	LIVE	Checks the top-20 coins by market cap first, using the 15-minute chart and a consensus of outside sources. Sells only in profit (no stop loss). When the site reopens it replays missed 15-minute candles, up to 7 days, at real past prices. Trade size follows the fund: a set % of the practice balance per trade (default 10%), or a fixed amount. Practice money only.
Gold	LIVE	Gold priced through PAXG: per ounce and per gram, charts to 1 month, spot and futures, big trades and big orders, gold signals.
Portfolio & security	LIVE	Portfolio split, realised results, price alerts, security checklist and a working Google Authenticator (TOTP) practice.
Trade journal	LIVE	Log trades placed anywhere and follow live profit and loss.
TestScan	SIMULATED	A practice block explorer for the practice transactions, clearly marked as not a real blockchain.

5 · INFORMATION LAYER

Market data, news and learning

Service	What it provides
Live market	Top USDT pairs by volume, gainers and losers, search, refreshed every 60 seconds.
Coin pages	Chart with EMA, RSI and trend; coin info: market cap, FDV, supply, all-time high/low, links, introduction.
Big trades & orders	Largest recent trades and largest resting orders for eleven markets including gold.
Insights	BTC dominance, order-book walls, checklists before buying a coin and before a trade.
Unlocks & new coins	Token-unlock calendar with share of supply; newly added coins with a strong risk label.
Listings & airdrops	Exchange listing announcements, Launchpool and Learn & Earn news, airdrop headlines.
News portal	Headlines and summaries from major crypto publishers, filter and search, linked to the source.
Daily blog	Morning market digest, evening trending coins and a daily lesson, each teased on Telegram.
Earn online	Sixteen skills-based sectors, a live remote-job feed (every 6 hours), rate and fee calculators, a progress tracker and a scam check.
Videos	Free crypto and skills videos collected from YouTube channels automatically; admins can pin videos from Telegram.

Accounts and community

Account	Optional; email or Google. Syncs practice data across devices.
Square	Any member can post an article; an admin approves it and BEWON adds one like. Members like posts (one each).
Referral link	Counts who joined through a member's link. A count only: no money, commission or reward.
Admins	Set by user ID in a protected collection; only admins can approve posts and add manual signals.

6 · SECURITY & PRIVACY

What BEWON does and does not hold

Area	Policy
User funds	None. There are no real deposits, so there is nothing to withdraw, freeze or lose.
Keys and seed phrases	Never requested, never stored. Practice seed words are not valid wallet words.
Identity documents	Never collected. The KYC section is a lesson only.
Personal data	Only for account holders: name, email, practice data, posts and referral count.
Access control	Firestore security rules limit each user to their own data; admin actions require an admin record.
Secrets	Telegram token and API keys exist only as repository secrets, never in the website code.
Practice addresses	Formatted so they cannot be mistaken for, or used as, real blockchain addresses.

What users should still do

- Never share a seed phrase or 2FA code with anyone, including people claiming to be BEWON.
- Treat every offer that asks for money first as a scam.
- Use an authenticator app on real exchanges and send a small test before large transfers.

7 · FEATURE MAP

What a full exchange has — and where BEWON stands

Status: **Live** = working now in practice mode · **Simulated** = working with example data · **Lesson** = explained, not operated · **Planned** = on the roadmap · **Exploring** = being evaluated · **Not planned** = outside BEWON's scope.

Feature	Status
Spot trading, market & limit orders	LIVE
Order book & recent trades	LIVE
Stop-limit, OCO, trailing stop	PLANNED
Perpetual futures with TP/SL	LIVE
Margin trading (cross / isolated)	PLANNED
Options	EXPLORING
Convert	LIVE
Earn: flexible & locked	SIMULATED
Staking & Launchpool practice	PLANNED
Auto-invest (DCA plans)	PLANNED
Signal / active trading bot	LIVE
Bot trading while offline (catch-up)	LIVE
Top-20 multi-source consensus	LIVE
Grid & DCA bots	PLANNED
Copy trading	EXPLORING
P2P desk	SIMULATED
Crypto deposit & withdraw flow	LIVE
Address book & withdrawal whitelist	PLANNED
Internal transfer to another user	EXPLORING

Feature	Status
Security centre & 2FA	LIVE
Price alerts (in app)	LIVE
Video lessons	LIVE
Remote-job feed & earning tools	LIVE
Push notifications	PLANNED
Advanced charting & drawing tools	PLANNED
Coin info & market data	LIVE
Web3 wallet & any token	SIMULATED
DEX swap practice	PLANNED
Trading leagues (practice)	PLANNED
Admin-added practice balances	PLANNED
Mobile app in Play Store	PLANNED
Developer API	EXPLORING
KYC verification	LESSON
Referral programme	COUNT ONLY
Fiat deposit / withdraw	NOT PLANNED
Real-money custody & trading	NOT PLANNED
NFT marketplace (demo)	SIMULATED
Node mining (demo points)	SIMULATED

8 · UPCOMING FEATURES (1/2)

What is coming, explained

Advanced order types

What: Stop-limit, OCO (one-cancels-the-other) and trailing stop on spot and futures.

Why: These are how experienced traders protect positions; practising them avoids costly mistakes later.

Margin trading lesson + practice

What: Borrow-to-trade with cross and isolated margin, interest and margin level shown live.

Why: Margin is common on exchanges and poorly understood; a safe simulator shows how fast losses grow.

Grid and DCA bots

What: A grid bot that buys low and sells high inside a range, and a DCA bot that buys in steps.

Why: The two most popular exchange bots, shown with their real weaknesses (trends break grids).

Auto-invest plans

What: Buy a fixed amount of chosen coins daily, weekly or monthly in practice.

Why: Teaches the slow, low-stress approach most beginners should try first.

Staking & Launchpool practice

What: Lock practice coins to see rewards, lock periods and unlock risk.

Why: Explains where “yield” comes from and why locked funds carry risk.

Address book & withdrawal whitelist

What: Save addresses with labels; optionally allow withdrawals only to saved ones.

Why: One of the strongest protections against account takeover on real exchanges.

8 · UPCOMING FEATURES (2/2)

What is coming, explained

Push price alerts

What: Alerts that reach the phone even when the site is closed.

Why: Lets users stop watching charts all day.

Advanced charting

What: Drawing tools (trend lines, levels), more indicators and saved layouts.

Why: Helps users mark support, resistance and their own trade plan.

DEX swap practice

What: Simulated swaps with slippage, price impact and gas shown.

Why: DEX mistakes (fake tokens, slippage) are a common way to lose money.

Practice trading leagues

What: Time-limited competitions on practice balances with public leaderboards.

Why: Motivation and learning; no money, entry fee or cash prizes.

Admin-added practice balances

What: Admins can add practice USDT to an account, for classes or events.

Why: Useful for teaching groups; it stays practice money and cannot be exchanged for real money.

Play Store app

What: The website packaged as an Android app.

Why: Easier install and notifications for mobile users.

Being explored

Copy trading	Following another member's practice trades, with their full record visible.
Options lesson	Calls and puts explained with a payoff simulator.
Internal transfer	Sending practice balance between members, only if it cannot become a way to trade value.
Developer API	Read-only access to public signals and records.

9 · ROADMAP

Phases, not promises

Phase 1

NOW

- ✓ Signals with public record
- ✓ Practice exchange: spot, futures, deposit and withdraw flow
- ✓ Auto bot, gold, Web3 tokens
- ✓ News, blog, insights, earn online
- ✓ Accounts and Square

Phase 2

NEXT

- ✓ Admin practice balances
- ✓ Advanced order types
- ✓ Address book and whitelist
- ✓ Grid and DCA bots
- ✓ Push alerts
- ✓ Signal-engine research and re-tests

Phase 3

LATER

- ✓ Margin and staking practice
- ✓ DEX swap practice
- ✓ Practice leagues
- ✓ Advanced charting
- ✓ Play Store app

Order and timing depend on testing and on keeping the platform free. Items move only when they are ready and safe; anything that would touch real money is outside the roadmap.

What will not be built

- A token, coin sale or any fundraising from users.
- Real deposits, custody or fiat payments.
- Paid “guaranteed” signals or money-for-referral schemes.

10 · SUSTAINABILITY & DISCLOSURES

Staying free, staying honest

Costs and funding

The platform runs on free tiers: GitHub Actions and Pages, Firebase and public data APIs. If funding is ever needed, options are labelled sponsorships, optional advanced courses and disclosed partner links to licensed exchanges. None is active today, and none would affect how signals are made or reported.

Risk disclosure

- Crypto assets are highly volatile. You can lose all the money you put in.
- Signals are information, not financial advice. Past results, live or backtested, do not predict future results.
- The published record currently shows losses. Treat every signal as something to study, not something to copy.
- Practice results do not include real-world slippage, emotions or execution problems.
- Listings, airdrops and new coins are news; many new coins fail or are scams.
- Leverage multiplies losses; beginners should learn spot trading first.
- The practice bot never sells at a loss. With real money, trading without a stop loss can lose far more.
